

# MAS LA

## Master of Advanced Studies in Landscape Architecture

### “Landscape Architecture Design Simulation”

The focus of the one-year Master of Advanced Studies in Landscape Architecture (MAS LA) of Professor Girot's Chair of Landscape Architecture at ETH Zurich is the integration of cutting-edge modeling and visualization technologies as design tools within the field of landscape architecture.

The course of studies is intended to be completed as a part-time program over two semesters and is divided into themed modules, workshops and 1 concluding synthesis module. The modular structure allows students to concentrate on individual themes, which can be combined within the framework of an individual project as the concluding synthesis module.

Through intensive work with the latest software in the area of modeling and visualization, graduates are capable completing complex design tasks as well as developing new forms of design method.

The chosen CAD programs (i.e. Rhino) are particularly appropriate for the visualization of large-scale landscape designs and offer the possibility for export to computer-steered milling machines. In addition, competences will be enhanced in the area of 3D GIS,

as well as the use of photography as a design tool and video as a tool for illustration and design.

The program is geared towards university graduates in the areas of architecture and landscape architecture who have professional experience and are already familiar with various visualization and modeling techniques.

**Registration:** Registration materials, including portfolio and reference letters, can be submitted between January 1st and May 31st, of each year. The program starts each year at the end of September. The number of participants is limited to 16. Details on course structure and schedule can be found:
